Tracheodouche™

S H O W E R P R O T E C T O R

For laryngectomy patients, the most common everyday activities are difficult since their respiratory system is more fragile. With the Tracheodouche™, patients can rediscover the pleasure of a shower « like before ».

Patients especially dread a shower, as it may lead to serious discomfort when water enters the tracheostoma and the lungs resulting in highly disagreeable fits of coughing.

A device incorporated in the Cyranose® Global System, the Tracheodouche™ permanently avoids these disadvantages. This shower protector makes it possible to have a shower without any regrettable consequences for the lungs, even ten days after the operation, in association with the CyTubeMajor™, to which it is connected. It may then be worn by patients after hospitalisation, without limit in time, each time that they want to have a shower.

Safety and freedom during a shower
The pleasure of having a shower that nothing changes over time.
